## WORLD QUALITY PRODUCT

**WIS GROUP** company is one of the largest suppliers of heavy duty vehicles' spare parts such as trucks, trailers, tractors and train.

The brief summary of our precious 50 years as is follows: Our company, which had start its' production in a small workplace with the entrepreneurship of Mr. Hazim AYDIN by motor and brake parts in 1968 . Developed in short time, and completed its' corporate identify with well-known brands.

Today, WIS GROUP presenting its' efficient products by its sister companies of plant which is in the Organized Industry.

WIS GROUP sells its manufacturer partners ' products made of casting and hot forging to the global market. Wisgroup's core competence is to produce guaranteed, quality spare parts for OE suppliers on the global market and to supply spare parts to wholesalers around the world .

Manufacturer partners in Turkey and our workshop customers in worldwide value Wisgroup's expertise as a reliable full-service partner that keeps their business and vehicles moving. With an annual production capacity of more than 36 million products and a product range of 18 thousand, our manufacturer partners have become a leader in the world with their entrepreneurial, strong, dynamic and innovative structure ..

Commercial and heavy commercial vehicles for the European, American and Asian applications are produced with ISO 9001: 2015, ISO 2701: 2013 TS EN ISO 14001: 2015 ve IATF 16949: 2016 certificates .

Wisgroup services with a various range of; Fifth Wheels , Air Springs, Wheel Hubs, Ball Joint, Centre Rod, Draglink, Tie Rod, Track Control Arm, Repair Kit, Tie Rod End, Wishbone, Stabilizer, Idler Arm, V Bar, Axial Joint , Bushing, Brake Drum, Brake Discs, Caliper Repair Kits, Oil Pumps, Flywheels and Compresors to its special customers; and always proud of being known as a trustable, specialized, fast, qualified and competitive partner by its customers. Every year by expanding our sales network in the automotive industry, hydraulic industry, railway industry, construction machines and agricultural machines from 250 grams up to 60 kilograms for different application areas such as forging and casting parts with closed die system is able to offer.

Design and mould production is maden by our manufacturer partner companies. Most of our items are equal the quality of OE replacement parts from market leading suppliers. In addition, we offer special agreement opportunities with customer-specific investments of manufacturers to whom OE companies and wholesalers that has worldwide distribution channels .

WISGROUP achieve which is none other than the satisfaction of customers.

# QUALITY

In compliance with all of our environmental and operational safety policies and procedures, all our products are manufactured following robust processes ensuring we meet and exceed our **TOTAL QUALITY PROGRAMME**. All of our employees are 100% committed in meeting all of our industries well known international quality standards (IATF: 16949, ISO: 14001, ISO: 9001, ISO: 27001, CE, CE & SAEJ10), They all play a vital part in the execution and continuous improvements when it comes to our **TOTAL QUALITY MANAGEMENT (TQM)** system .

Our on going education, training programmes and investments in our employees plays an integral role at WIS and are important activities that ensure we only achieve the very **HIGHEST STANDARDS** when it comes to quality and in turn creating **PEACE OF MIND** for all our customers. Using only the very latest in design, test and manufacturing equipment is essential when it comes to the production of pressure vessels (**AIR TANKS**) and this approach guarantees that all the required international certification requirements are always met.

## Pressure Vessels (Air Tank), Metal Measurement and Control Equipment

- \* Brinell / Vickers hardness tester
- \* Surface roughness measuring devices
- \* 3D surface scanning
- \* 7 axis measuring arm (FARO)
- \* Spectrometer
- \* Tensile tester
- \* Bending test device

## Welding Inspection Equipment

X-Ray Devices

# R&D

## IN HOUSE R&D CENTRE

All of the design, testing and development of **AIR TANKS** is carried out within our in house on site fully accredited R&D centre. Everything is application engineered only using original samples .Equipped with over 150 dedicated engineers covering all the skill sets required to ensure we offer our partners like for like when comparing our product with the OE. This facility also allows us to continuously optimise our development costs and also offer a premium quality product.

By carefully selecting all the required materials and following all the processes in compliance with EN 286-2: 1992 Pressure Vessels (**AIR TANK**) standards, our products are designed and manufactured to function and withstand the most extreme road and weather conditions. In parallel with this we also ensure product safety by applying the same calculation methods and test procedures defined within the same product standards.

All of the products we develop comply with the industry required CE standards and follow process and product verification guidelines. Tightness and pressure-blast test inspections are also carried out by 3rd party independent organizations.

Regular rigorous testing and engineering studies are carried out throughout all the stages of our manufacturing processes starting from the prototype design, production, testing and the final approval process. By following our systematic Quality and TQM processes and procedures our team of engineers are always looking for ways to continuously improve our product quality and reduce further our development times in the most effective and efficient ways.

# TOOLING SHOP

## IN HOUSE TOOLING

Our **IN HOUSE** tooling capabilities enable us to produce our own moulds for every different part within our complete product offering.

By having this **ALL UNDER ONE ROOF** we are able to design and manufacture our own tooling quickly and in turn allow us to have a development time and speed to market the is **SECOND TO NONE**.

Our tooling department is fully equipped with the very latest in software and technological equipment, which allows us to produce tools & moulds quickly, efficiently and error-free which again demonstrates **THE WIS DIFFERENCE**. Our quick development time across all product categories is something we are very proud of.

Our controlled and robust in house preventative maintenance process ensures that our tooling is always maintained to the highest quality and this avoids any possible tooling or quality issues that could occur.

This offers you **O E Q QUALITY** with **A FTERMARKET F LEXABILITY** and further demonstrates flexibility and capabilities of partners that sets us apart from the rest.

# METAL FORMING

When it comes to a pressure vessel (AIR TANK), we take extreme care when it comes to the product geometry, pressure resistance and the product aesthetics. As well as the welding areas and the front metal shaping it is imperative that the welding operation is done to the very **HIGHEST STANDARDS**.

All of these important activities are carried out using each parts unique moulds and using our fully automated manufacturing equipment

# WELDING

## IN HOUSE WELDING

Air Tank joints are a critical part of the product. Welded joints are very closely monitored and 100% checked during the manufacturing process. As we all know sub standard welding can result in catastrophic failures. WIS has multiple automated Robotic welding lines and regular welding checks and tests are carried out throughout the production process of all our air tanks.

- \* Fully automatic robot line for sleeve welding,
- \* Special automated welding lines for cylinder butt welding,
- \* Special automated welding lines for cylinder perimeter welding,

Our Air Tank welding quality is kept under constant control and regular destructive and non-destructive examinations and tests are carried out by selecting random samples on a regular basis during the production process.

# TESTING

We are doing 100% high pressure tests to all our products as specified in the CE directives. We always prioritize product and vehicle safety and test the sealing and compressive strength of the each products cylinder, cover and sleeve surfaces under the test conditions which are 1.5 times higher then the maximum working pressure ( $P_s = P_{max} * 1.5$ ).

During the "New product R&D" operations, we test the weld zone tear and weld strengths by doing blast pressure tests which are 5 times higher then the maximum working pressure ( $P_s = P_{max} * 5$ ) which specified by international standards.

# PAINTING

## IN HOUSE PAINTING

All of our air tanks are coated using electrostatic powder paint. This ensures our air tanks are protected both on the outside and more importantly on the inside in order to provide the highest corrosion resistance standards which is, as we all know one of the main reasons why air tanks fail.

Typical tests carried out during powder painting process include;

Paint layer (coating) thickness tests

Brightness test

Impact test

Salt spray test

Cross-cut test
